**We write Clojure at The Climate Corporation,
and we're hiring! Come work with us!**

Some people actually program in languages
other than Lisp.

I started using Common Lisp in 2004 for evolutionary computation as my M.S. thesis, and quickly learned to love Lisp.

And then I got a real job doing embedded C for
an avionics firm up in Milwaukee.

Around 2009 I started messing around with Ruby a lot, and it's actually pretty nice for a not-quite-Lisp.

But for the last two years, I've been doing
Clojure as my main gig, and that's been pretty
awesome.

There's just one problem I really have with
Clojure ...

Conclusion
